PREFACE

Price collection is one of the major assignments undertaken by the Directorate of Economics and Statistics. The importance and usefulness of the information on price movements is significant. This Directorate has been collecting price data for both Wholesale and Retail. Among the Retail prices, the statement of weekly prices of 89 essential commodities is being collected on every Friday from the District Headquarters. In addition to this, Wholesale prices of 52 Agricultural commodities are also being collected on a weekly basis.

The Publication entitled "Monthly Price Bulletin" is a regular feature of the Directorate of Economics & Statistics. The price data reflected in these Bulletins gives a bird's eye view of the price scenario of the important consumer/agricultural commodities for the month the Bulletin relates to. The purpose behind its publication is to inform users about the price fluctuations within a given period of time.

The instant Bulletin covers the price data for January 2026 and its comparison with the data of the previous month and the corresponding month of the previous year, 2025, in tabular as well as in graphical form.

The data is collected by the designated price collectors working in the District Statistics & Evaluation Officers every week. The weekly district-level data is compiled in this Directorate and presented in the form of a Monthly bulletin.

G. VEGETABLES

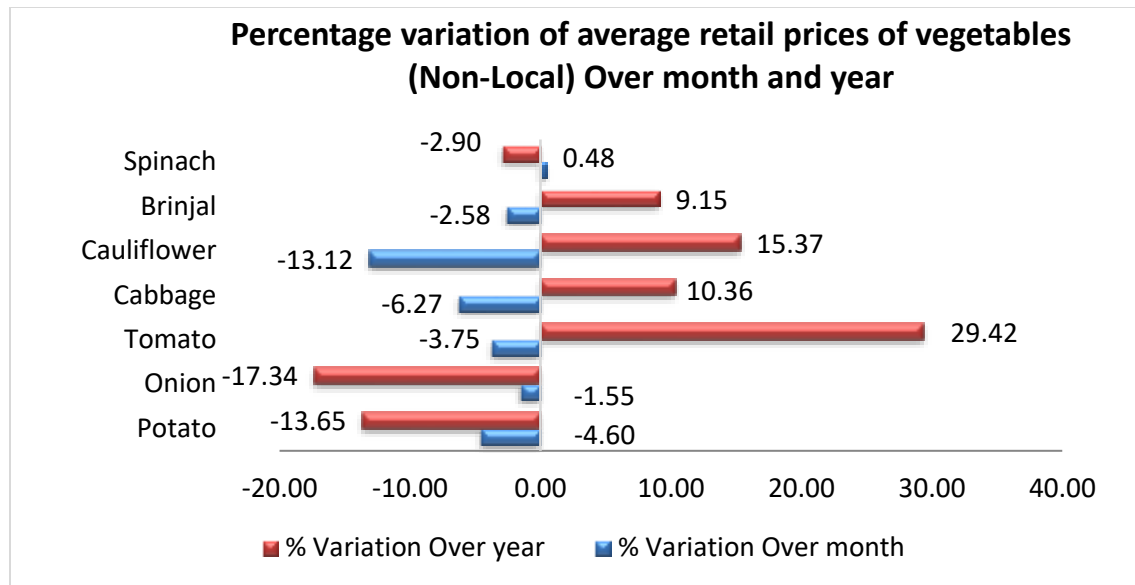

Comparison of UT average Retail prices of Vegetables.

- Vegetables are typically seasonal, with prices fluctuating based on supply. For example, these vegetables might be in high supply during certain months (leading to price drops) and in lower supply during others (causing price increases).
- Unfavourable weather conditions, like floods or droughts, can significantly affect the production of vegetables, leading to sharp price changes, especially for non-local varieties that may rely on regions with different growing conditions.

The downward price fluctuations observed in January 2026 are likely due to seasonal factors, such as peak harvests for many vegetables. On the other hand, upward price trends can be attributed to lower availability during certain months, compounded by supply chain factors and shifts in demand throughout the year.
