G. VEGETABLES

Comparison of UT average Retail prices of Vegetables.

- Vegetables like **Cauliflower**, **Tomato**, and **Cabbage** are typically seasonal, with prices fluctuating based on supply. For example, these vegetables might be in high supply during certain months (leading to price drops) and in lower supply during others (causing price increases).
- The abundance or scarcity of crops due to harvesting cycles directly impacts the prices. Vegetables such as **Onion** and **Potato** can see price hikes when they are out of season, while price decreases occur during peak harvest months when supply is higher.
- Unfavorable weather conditions, like floods or droughts, can significantly affect the production of vegetables, leading to sharp price changes, especially for non-local varieties that may rely on regions with different growing conditions.

The **downward price fluctuations** observed in **July 2025** are likely due to seasonal factors such as **peak harvest seasons** for many vegetables. On the other hand, the **upward price trends** (like for **Potato, Onion, Tomato**) can be attributed to **lower availability** during certain months, compounded by supply chain factors and demand shifts across the year.
